

Automatic Trading SyncTrend Dax tf 1 hour

A Discord chat room is open for users of automated trading systems.

There, we share information about trading bots, as well as announcements when manual action is required (rollovers, 'shortened' trading days, etc.).

Join us:

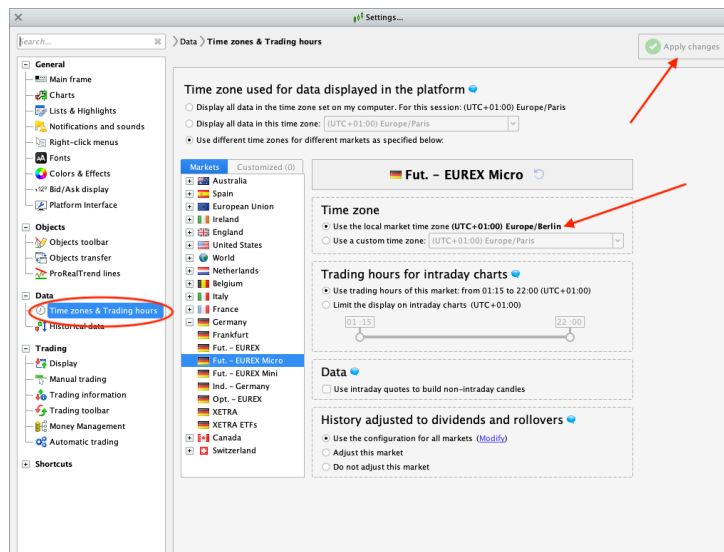

<https://discord.gg/QCwhQjqRW4>

! Chart timezone

The Automatic Trading system must be launched on the chart set in the time zone of the traded instrument.

This means you don't have to worry about summer/winter time changes, which occur on different dates depending on the country.

- Go to the "Settings" menu
- "Platform settings"
- "Time zones & Trading hours"

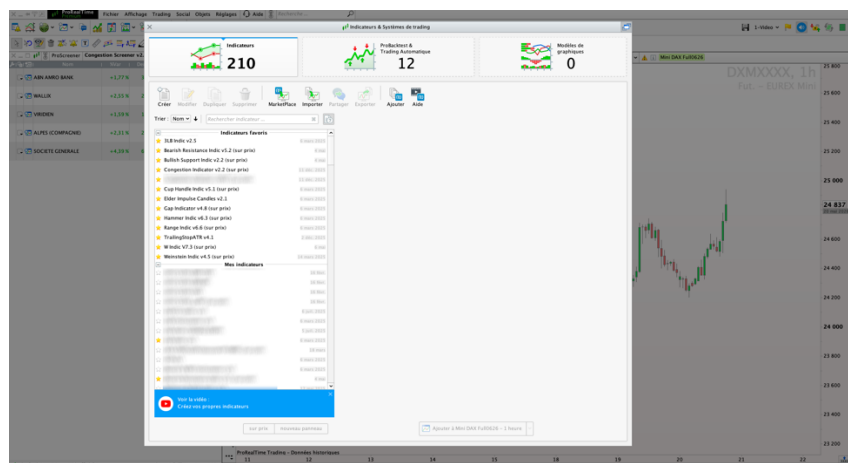

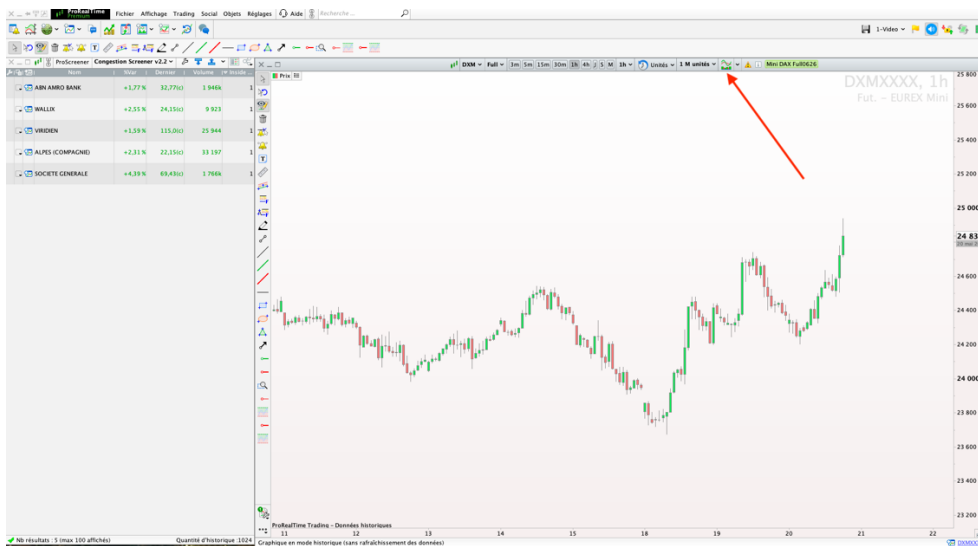

- Click « Apply Changes »
-  Exit and restart the PRT platform to validate the timezone changes BEFORE launching the robot in the following steps.

Starting up the automatic trading system

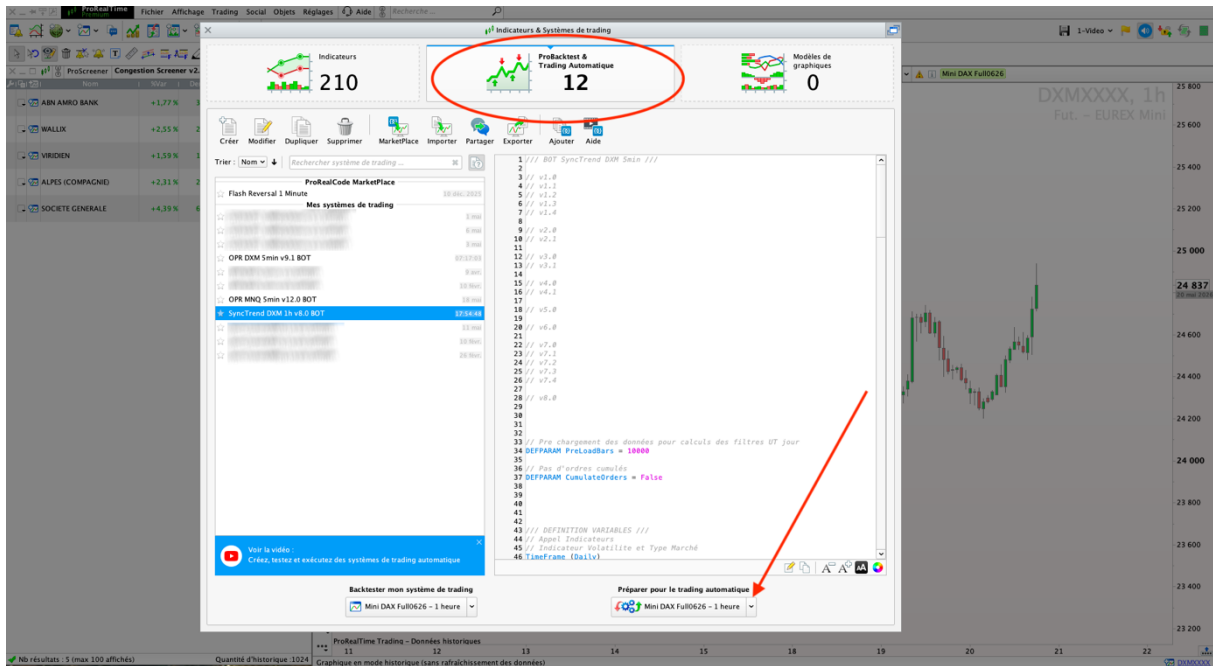

Find information on the Prorealtime website:

<https://www.prorealtime.com/en/create-a-trading-system-step-6>

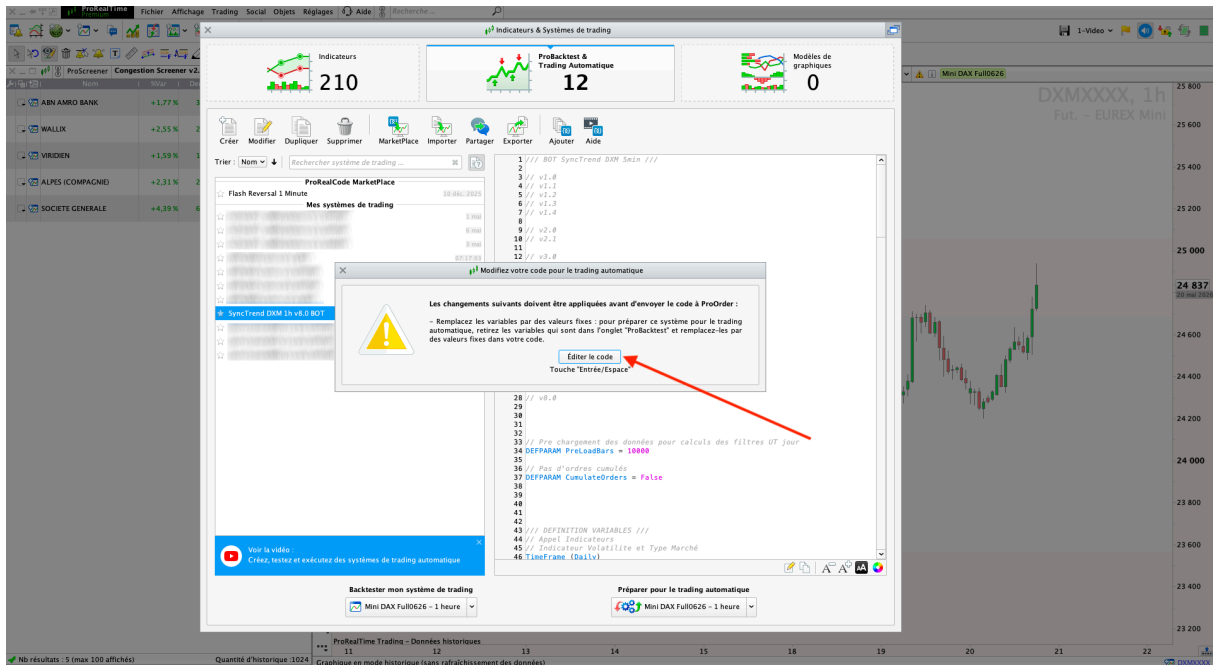

- Open the chart for the instrument you wish to trade with the system (DXSXXXX or DXMXXXX) in 1 hour timeframe.
- Open the indicators menu by clicking at the top of the chart.

- Select the 'Backtesting & Automatic Trading' tab and select the desired strategy
- Click on 'Prepare for automatic trading' at the bottom right.

- Click « Edit the Code »

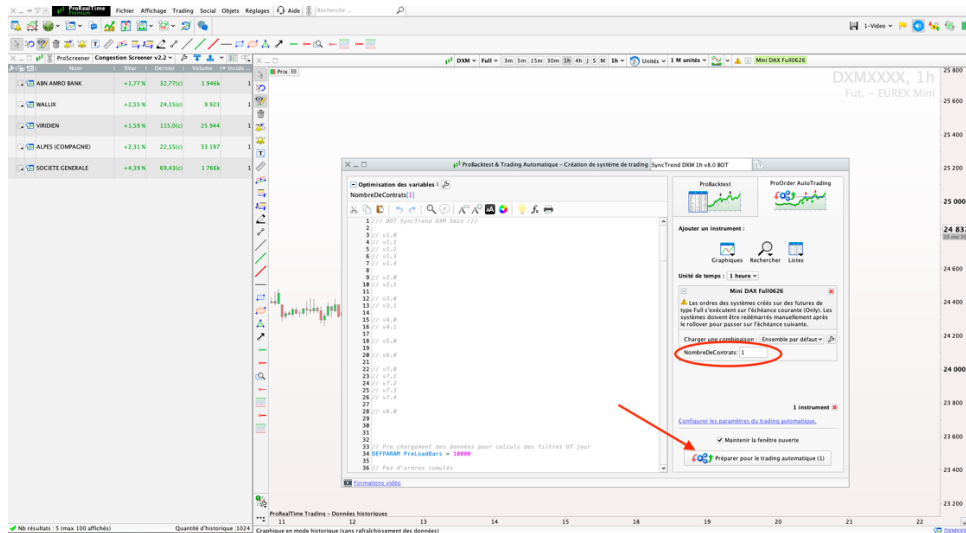

- By default, the number of contracts is 1. Change the quantity as desired.

⚠ The required margin is calculated per contract. Therefore, for 2 contracts, you will need 2x the margin.

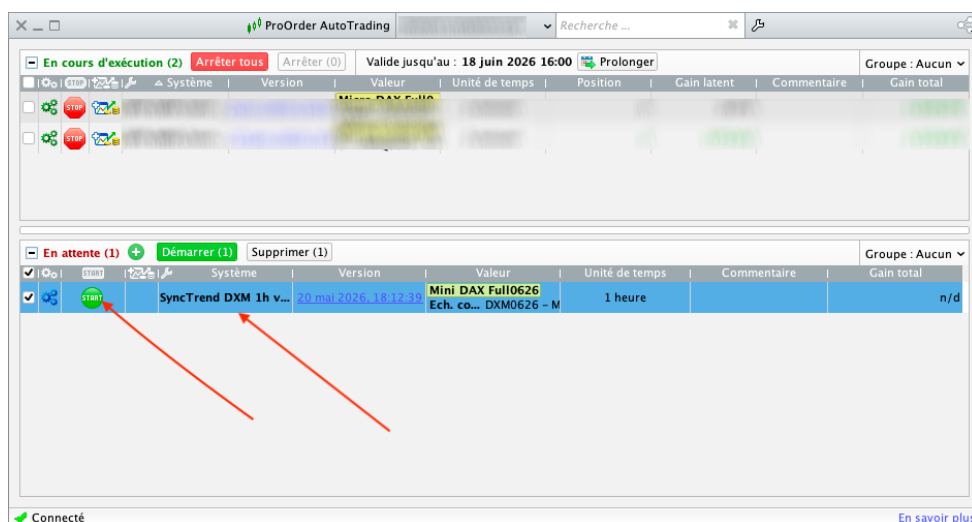

Find the margins on the Prorealtime website

<https://www.prorealtime.com/fr/interactive-brokers/margins>

- Click on 'Prepare for automatic trading' at the bottom right

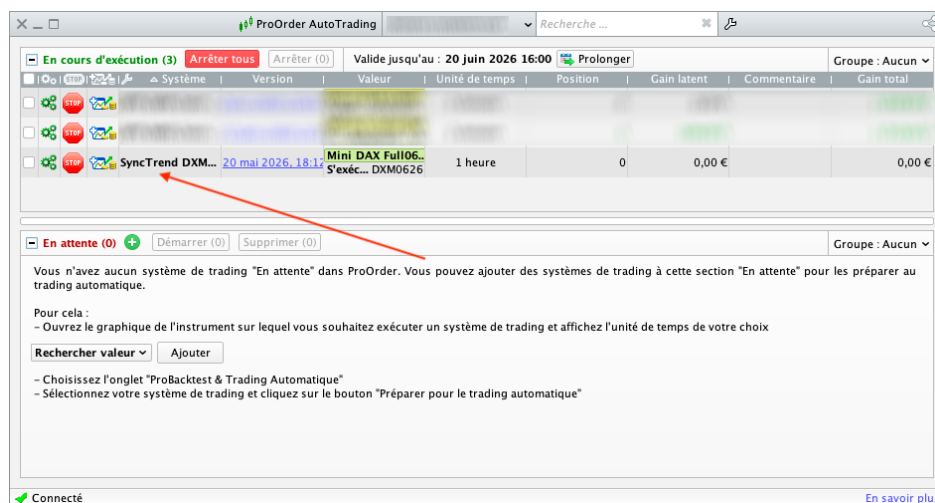

- The automatic trading system is sent to the PRT server, the ProOrder window opens, and the system appears in the 'Not Running section
- Click « Start » button

- The system settings window will open
- Change the « Maximum position size” : enter twice the number of contracts selected in the previous step (in the event of a reversal position)
- Change the « Maximum number of orders per day » : the system places a lot of orders (in, out, stop, trailing stop, ...) so you must set at least a minimum of 40
- Launch the system by clicking on « Activate the trading system »

- The auto trading system moves to the 'Running' section of the ProOrder window

The system is now running!

Rollovers Management

When futures contracts expire, the automatic trading system must be switched from the current expiry date to the next one.

- ProRealTime sends a notification a few days before the current expiry date, which is visible at the top of the chart.
- Detailed information can be found by clicking on the 'i' at the top of the chart.

- The window that opens shows the date and time of the rollover, as well as the date and time of expiry

Mini DAX Full1225 The information displayed below is indicative.

The Mini DAX Future is a standardised futures contract. It allows its holder to commit to buy or sell at a future date and at a pre-determined price 5 units of its underlying: the DAX (the Frankfurt Stock Exchange's benchmark index made up of 40 of the largest companies list...)
